No norādītajām cenām tiek piemērotas visas līdzšinējās klientu atlaides.

Cenas ir spēkā līdz prece atrodas noliktavā.

Perfekt Akrylatfärg pielieto koka fasāžu, apmestu betona virsmu, krāsotu metāla lokšņu, ūdens noteku reņu, cinkotu un plastmasas cauruļu, apdarei. Pateicoties tam, ka krāsa labi klājas uz agrāk krāsotām ar lateksa, alkīda un eļļas krāsu, virsmām, to plaši pielieto remonta darbos.

Акрилатлатексная краска для деревянных, бетонных, оцинкованных, металлических и алюминиевых поверхностей.

Akrylatfärg is a semi-flat, waterborne acrylic latex exterior paint for covering wood, concrete, galvanized sheet metal and aluminium. The paint can be used to cover both new, unfinished surfaces and surfaces that have previously been painted.

Akrylatfärg is ideal for covering exterior woodwork, concrete foundations covered with plaster/stucco, painted metal exteriors, gutters and hang pipes made of galvanized metal and plastic, among other applications. Akrylatfärg is also very suitable for repainting jobs, due to its ability to adhere effectively to surfaces that have been previously painted with acrylic, alkyd and oil paints.

Akrylatfärg is very easy to apply, quick drying and will not yellow or crack with age. It also retains its gloss and colour very well over a long period of time. However, when painting old buildings of special historical or cultural value, the type of product originally used to paint the building should be used.

Being a waterborne paint, Akrylatfärg is environmentally friendly.
